# We shape your ideas.

Chevalier Machinery is a leading manufacturer of grinding, turning and milling machines. Our machines are assembled in our own 9001-certified facilities that include departments for R&D, machining, sheet metal production and electronics. Chevalier USA has an impressive showroom, main parts, warehousing, distribution and training/tech-support center, which gives our worldwide customers superior support and a value-added experience.

Customer satisfaction is always the highest priority at Chevalier. Our knowledgeable service engineers, technicians and sales representatives travel around the world to provide assistance to our dealers and end-users. Chevalier's expert network of dealers in more than 80 countries is thoroughly trained to adhere to Chevalier's superior customer service standards. Our modern warehouse facility maintains a comprehensive inventory of parts for all machines. A well-educated staff also conducts thorough service training programs for our dealers and end-users.

Chevalier continually offers state-of-the-art craftsmanship and every machine is assembled to guarantee superior running accuracy.

## FBL-500 Series Heavy-Duty Slant-Bed CNC Lathe

Chevalier's FBL-500 Series is an incredibly versatile machine that is helping manufacturers with a wide range of needs.

Comparing to lathes with horizontal beds, the 45-degree slant bed design of the Series offers unique advantages to the end users. The user-friendly design of the slant bed shortens the distance between the operator and the work piece. The proximity of the chuck, turret, and tailstock to the front of the machine enables the operator to load and unload work pieces with ease. The slant angle also ensures a swift flow of chips and coolant into the chip pan when the machine is in operation. Furthermore, the slant-bed lathes take up less floor area than horizontal-bed lathes.

The bed of the FBL-500 Series is a single-piece Meehanite® casting with a wide-span and ribbed torque tube design, which prevents thermal deformation and twisting. There are four oversized box ways that are 130-mm (5.1") wide and 80-mm (3.1") high. The surfaces of the box ways are heat treated to Rockwell 55 degrees and stress relieved to ensure stability and support during operation.

In addition, we applied Turcite B, an anti-friction material to the machines to ensure smooth operation. This material dramatically reduces friction and virtually eliminates guideway wears; at the same time, it also dampens and absorbs vibration for better surface finishes of the work piece.

Spindle bore diameter ranges in size up to 12.5". Maximum swing diameter is 40.5"; cutting diameter is 37". Three sizes are offered: 80", 120" and 160" and a special Z-axis, ball screw support maintains high precision and stability. Dual-chuck and easy access design provides convenience of loading and unloading longer parts.

Powerful 60HP spindle motor that features a four-stage gearbox and generates 7,118 NM torque would satisfy most cutting condition of large-diameter work pieces or tough material applications. Massive, 200-mm-thick disk and hydraulic clamping of its curvic-coupling design ensure cutting stability during rough turning environments.

## **FBL-500 Series**

Dual Chucks Capability  
Swing Over Bed: up to 40.55"  
Spindle Motor: up to 60HP  
Bar Capacity: up to 12.5"  
Turning Length: up to 160"  
Transmission: 3-4-speed Gearbox  
Live Tooling, C-Axis Available

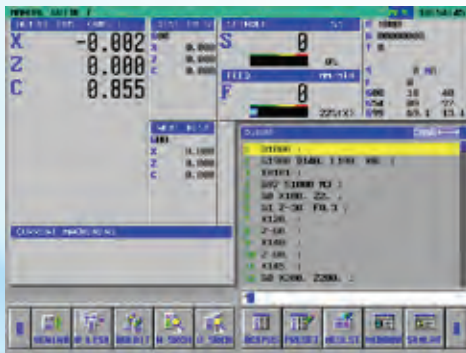

# FBL-500 Series

## Construction and Features

The FBL-500 Series has a FANUC 0i-TD control with FANUC digital servo drive and motor that are standard features. The standard FANUC 0i TD control and LCD screen generates high-resolution graphics and functions to achieve best possible operation environment. The high-rigidity box way with scrapped slide way and precision oil network is designed for superb transmission efficiency. The Series is designed with its 45-degree slant bed machine body structure with a low center of gravity for enhanced machining accuracy.

### Cylindrical Interpolation

### Polar Coordinate

### Thread repair function

## FANUC 0i-TD Control Features

- Simultaneously controllable axes: 4
- Minimum programmable increment: 0.001mm (0.0001")
- Program storage length: 1280m (512k)
- Registerable programs: 400
- Backlash compensation
- Pitch error compensation
- Constant surface speed control

## Programming Features

- Tool nose radius compensation
- Combined use of absolute/incremental command
- Inch/metric programming
- Multiple repetitive cycles
- Canned cycles for drilling
- Decimal point programming
- Reference point return
- 10.4" color LCD
- Absolute/incremental programming
- 64 pairs of tool offsets
- Run hour and part count display
- Automatic operation (memory)
- Data protection key
- Program number search
- Rapid traverse override
- Spindle speed override
- Sequence number search
- Manual reference position return
- Manual hand feed rate

## FBL-530

## FBL-510

## Components

### FBL-530/540 Support

The powerful heavy-duty spindle is supported by cylindrical bearings, which provide a large contact surface that enhances the rigidity of the machine for heavy loads and high surface finishes.

### Tailstock

**(programmable)**  
Driven by hydraulic motors, the programmable tailstock enables the machine to clamp work pieces of various size and length.

### Massive Thick Turret

Curved teeth clutch ensures tool turret clamping accuracy and stability. 200mm thick turret disc delivers stable support and reduced vibration. Optional  $\varnothing 80\text{mm}$  bring bar holder available.

### Optional BMT85

Optional power tool turret available for remarkably improved rigidity and comes with 11Kw (15HP) milling motor.

# FBL-500 Series

## Construction and Features

### Powerful Gear Box

Three to four speed for machines with different spindle hole diameters. Four-speed gearbox is 7.7" and three-speed gearbox is 12.5".

### 45-Degree Slant Bed One Piece Casting

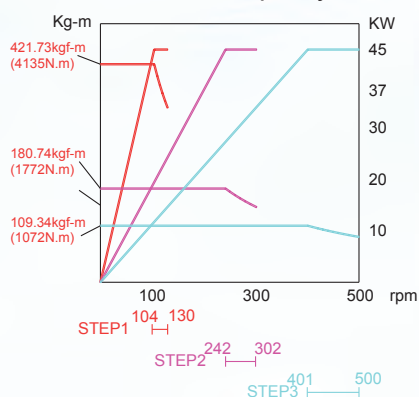

- High rigidity bed design, swing 1030mm, 1160mm width. Box guide way 130mm W x 80mm H, high-performance for maximum workpiece 940mm in diameter.
- Slant bed structure with low center of gravity, easy access and workpiece changeovers. Improved chip removal helps prevent thermal deformation.
- High torque 7118NM at low speeds.
